

Jagath Jijo

+1 669 800 9405 | jagathjijo01@gmail.com | linkedin.com/in/jagath-jijo | github.com/jahgath | jahgath.github.io

Web developer experienced in CMS, SEO, and QA testing, with a track record of building and maintaining accessible, mobile-friendly websites.
Clear communicator and team player with a strong focus on user experience.

EXPERIENCE

Sync Design Technology

March 2025 – July 2026

Full Stack Developer

London, UK

- Contributed to ~15–25% growth in recurring revenue by independently mapping the platform (20 workflows, 100+ subflows, 200+ features) and replacing hard-coded entitlements with a MERN-based Relationship-Based Access Control (ReBAC) system; its 3 configurable tiers offered tailored feature packages to smaller clients while monetizing full-platform access for the largest customers.
- Worked directly with client HR and operations teams to digitize legacy workforce tracking across 5 organizations (including an enterprise account with 500+ employees), building centralized scheduling, leave, and attendance modules that reduced manual scheduling and leave processing time by ~30–40%.
- Designed and launched a paid Express API product adopted by 4 external vendors, giving them access to approved non-sensitive platform data without full application onboarding (API keys, authentication tokens, and HMAC verification, with sensitive internal data isolated).
- Built centralized in-app SMS and email workflows with individual and bulk messaging, real-time character and segment tracking to minimize SMS costs, and Microsoft email integration, reducing context switching and increasing messaging feature usage ~2x.

Kitecyber

September 2024 – March 2025

Software Development Engineer & UI/UX Design Consultant

Silicon Valley, California, USA

- Facilitated end-to-end client onboarding for 5+ enterprise organizations managing 500+ Linux devices; gathered requirements and built a cross-platform Go/Wails desktop application to transition non-technical users from CLI to a graphical interface.
- Automated compliance data collection across 2,500+ Linux and macOS devices with secure, auto-running scripts that gathered system evidence for SOC 2, ISO 27001, and HIPAA.
- Developed a centralized administration dashboard with Vue.js, TypeScript, and Tailwind CSS for platform management across 5+ organizations, and reduced manual integration-testing effort by approximately 40% by automating 30+ critical workflows with Playwright, freeing QA to focus on feature testing and strengthening release reliability.

Ather Energy

February 2023 – September 2024

Frontend Developer

Bangalore, Karnataka

- Elevated targeted electric-vehicle keywords in India from outside the top 15 to consistently ranking within the top 3 by automating metadata, XML sitemap, canonical URL, and redirect management.
- Cut content-publishing time from days to hours by migrating workflows to Strapi CMS and implementing on-demand revalidation, enabling product teams to publish updates directly without requiring full application rebuilds or engineering-led deployments.
- Built customer-facing product pages for Ather's 450 series and Rizta electric scooters using Next.js, and developed frontend experiences for the end-to-end scooter booking flow.
- Improved application reliability by increasing Jest test coverage from 55% to 75%, while reducing mean time to detection by approximately 50% through centralized API observability with Winston and Elasticsearch and automated real-time Slack alerts.

PROJECTS & RESEARCH

Future Vision Tours – Travel Agency Website | *Next.js, React, Tailwind CSS* | futurevisiontours.com

2025

- Rebuilt my family travel agency's legacy PHP site as a modern Next.js and Tailwind CSS application with a responsive, animated UI (Aceternity UI), replacing a dated interface with limited content management.
- Implemented technical SEO with canonical tags, meta tags, robots.txt, and an XML sitemap regenerated automatically on every release; integrated Google Analytics to track traffic, user engagement, and inquiry conversions.
- Built a spam-protected inquiry pipeline using Google reCAPTCHA and the Resend email API, delivering customer inquiries directly to the business inbox; automated builds and deployments with GitHub-based CI/CD.

Mitigating Dataset Bias in Plant Disease Classification | *TensorFlow, PyTorch, scikit-learn, MobileNetV2*

2023

- Built a three-stage image-data pipeline for cleaning, augmentation, diversity analysis, and open-source dataset integration to identify and mitigate representation bias in plant-disease image datasets.
- Reduced the class-imbalance gap for common diseases through iterative dataset refinement and MobileNetV2 experimentation using TensorFlow, PyTorch, and scikit-learn, evaluating classification performance with accuracy, F1-score, and confusion matrices.

TECHNICAL SKILLS

Languages: Go, Dart, Java, Python, C, C++, TypeScript, JavaScript, SQL

Frontend & App Development: React, Next.js, Vue.js, Wails, Flutter, Swift

Backend & Data: Spring Boot, Node.js, Express.js, REST APIs, gRPC, PostgreSQL, MongoDB, Redis, Elasticsearch

Infrastructure & Tooling: Linux, Docker, Kubernetes, Prometheus, Grafana, Sentry, Git, Playwright, Jest

AI/ML & Data Science: PyTorch, TensorFlow, scikit-learn, MLIR, LLVM, AWS Neuron SDK, AWS Inferentia, AWS Trainium, OpenCV

AI Development Tools: GitHub Copilot, Claude, ChatGPT, Codex, Gemini, Antigravity, Roo Code

EDUCATION

San Jose State University — *Master of Science in Software Engineering, Specialization in Data Science* San Jose, CA | Expected May 2028

Government Model Engineering College — *Bachelor of Engineering in Computer Science*

Kochi, Kerala, India | July 2023
